Abstract

This research is about Deixis in *All Too Well* movie script. The objectives of this research are to find out the types and functions of Deixis in *All Too Well* movie script. Therefore, this research uses the theory of Yule. This research was conducted using qualitative methods. The data of this research is Dylan and Sadie's dialogue from the *All Too Well* film. The results shows that there are three types and three functions of Deixis in *All Too Well* Movie Script. The types of deixis found are personal deixis, spatial deixis and temporal deixis. Furthermore, the functions of deixis are pointing. This pointing is to identify the person (who), location (where) and time (when) here, which are designated as person deixis, spatial deixis, and temporal deixis.

Keywords: *Deixis, Pragmatics, Movie script*

Abstrak

Penelitian ini tentang Deiksis pada Naskah Film *All Too Well*. Tujuan dari penelitian ini adalah untuk mengetahui jenis dan fungsi Deiksis dalam Naskah Film *All Too Well*. Oleh karena itu, penelitian ini menggunakan teori Yule. Penelitian ini dilakukan dengan menggunakan metode kualitatif. Data penelitian ini adalah dialog Dylan dan Sadie dari film *All Too Well*. Hasil penelitian menunjukkan bahwa terdapat tiga jenis dan tiga fungsi Deiksis pada Naskah Film *All Too Well*. Jenis deiksis yang ditemukan adalah deiksis personal, deiksis spasial, dan deiksis temporal. Selain itu, fungsi deiksis juga bersifat penunjuk. Penunjukan ini bertujuan untuk mengidentifikasi orang (siapa), lokasi (dimana), dan waktu (kapan) yang dimaksud dalam deiksis persona, deiksis spasial, dan deiksis temporal.

Kata kunci: *Deiksis, Pragmatiks, Naskah Film*

Introduction

In human existence, the use of language is a crucial component. Language is utilized for correspondence between people. Ondondo (2015) determined that language is the main medium for communicating ideas, whether orally or in writing. So, language is essential and important to communication. So, it follows that communication would suffer if there were a language issue. The impact of language impairments on communication, however, has not received much attention. Additionally, the study of utterance context, phrase meaning, and their relationships one another is known as pragmatics.

Yule (2014) contended that pragmatics is the study of how a speaker or conversation partner delivers meaning and how listeners or viewers comprehend it. The study of pragmatics focuses on the

occurrence of deixis in both everyday life and literary works including novels, short stories, films and plays. Pragmatics is the study of how context affects speech or the meaning of speech situations.

Cummings (2018: 31) proposed that deixis is a term or phrase that refers to a word, phrase, or statement whose reference changes depending on who is speaking, when they are speaking it, and where they are speaking it. Cummings also said that a word is considered to be deixis if the referent shifts or transforms depending on who is speaking, as well as the context in which it is stated.

This research specifically focuses on analyzing deixis in light of the rapidly expanding body of research on the subject. Because there are more deixis in the research subject than in past research, as was previous studies, like one of them is Levinson (1983). Levinson established that deixis is divided into five types, there are personal deixis, time deixis, place deixis, social deixis and discourse deixis.

This research is different from that study. Fortunately, the results are consistent with Yule (2017)'s three types of deixis, as are, personal deixis, spatial deixis, and temporal deixis, which the researchers used in their research. Additionally, *All Too Well*'s deixis research has not been discovered yet. Therefore, it is imperative to carry out this research. Yule (2017) assumes that the Greek word for deixis is deixis expressions, which means (pointing) through words. Because every utterance is associated to refer to the people, place, and time, it is used to analyze sentences, conversations, and other expressions. The listener would understand the meaning if they are aware of who (personal deixis), where (spatial deixis), and when (temporal deixis) the utterance is made.

Method

3.1 Research Design

This research use a descriptive qualitative research design. The researcher selected it because the researcher examined the types deixis included in the *All Too Well* Movie Script. Arikunto (2013) describes that descriptive research is the research that explains or characterizes a contemporary phenomenon with a view to examining the circumstances, with the findings being provided as a study report. Qualitative method is used as opposed to the quantitative one because it's far continually used in the subject of social science.

3.2 Source of Data

The source of data in this research is *All Too Well* film. The data has been taken from the dialogue between Sadie Sink and Dylan O'Brien in the Taylor Swift's film entitled *All Too Well*. Data has been collected from Sadie Sink and Dylan O'Brien's dialogue, which contains deixis to collect data needed in the research process that has been carried out.

3.3 Procedures of Data Collections

The procedures of data collection are formulated as the followings:

1. Searching and downloading *All Too Well* film.
<https://lyricstranslate.com/en/taylor-swift-all-too-well-10-minute-version-shor-lyrics.html>
2. Observing carefully the *All Too Well* film over and over again.
3. Searching for books, thesis, and journals related to deixis and pragmatics theory.
4. Identifying the deixis in the dialogue.
5. Classifying deixis in their own types.
6. Highlighting the important points in the script that related to the problem being discussed.

3.4 Procedures of Data Analysis

The procedures of data analysis are formulated as the followings:

1. Analyzing the dialogue contained in the *All Too Well* film to find out the types of deixis and the functions of deixis that occur in the film.
2. Classifying the data based on the theory proposed by Yule (2017: 256) about three types of deixis, and theory proposed by Yule (2014: 257) about three functions of deixis.
3. Drawing the conclusion as the result of the research.

Result and Discussion

Yule (2017) assumes that the Greek word for deixis is deixis expressions, which means (pointing) through words. Because every utterance is associated to refer to the people, place, and time, it is used to analyze sentences, conversations, and other expressions. The listener would understand the meaning if they are aware of who (personal deixis), where (spatial deixis), and when (temporal deixis) the utterance is made.

The researcher examined the three types and their functions of deixis: personal deixis, spatial deixis, and temporal deixis.

Types of Deixis

1. Personal Deixis

In personal deixis, the first-person is the speaker's relates to himself by using the term "I". The second-person is an individual (or individuals) who is spoken to in a dialogue similarly to you. The third-person (singular) is a person who is neither someone who speaks nor someone who listens, for example, her, him or it.

1. First-person pronouns

Sadie: "Listen to **me**!"

In this first-person pronoun, the word "me" it can be classified as a direct indication of a personal deixis that belongs to the category of first-person pronouns.

2. Second-person pronouns

Dylan: "I'm sorry I dropped **your** hand"

In this second-person pronoun, the word "your" can be classified as a direct indication of personal deixis that "you" belongs to the category of second-person pronouns.

3. Third-person pronouns

Sadie: "**They** are all older than me"

In this third-person pronoun, the word "they" can be classified as a direct indication of personal deixis that belongs to the category of third-person pronouns.

2. Spatial Deixis

Location deixis or spatial deixis refers to the location or place that the speaker is referring to when they use language. Locations close to the speaker and locations far from the speaker are distinguished in spatial deixis.

1. Dylan: "These are people I haven't seen in like ten years and you just sit **there** the entire time"

The word "there" is included in a place that is distant

2. Sadie: "You dropped my hand! What am I supposed to do with **that**?"

The word “that” is included in an object that is close to them.

3. Temporal Deixis

A role of temporal deixis is to clarify whether or if the duration of a moment in discourse pertains to time.

1. Dylan: “These are people I haven’t seen like **ten years** and you just sit there the entire time”

The word “ten years” conveys past occurrences

2. Dylan: “You’re making it about you’re, you’re acting self... I’m saying you’re acting selfish, absolutely. **Right now** that’s exactly what’s happening.

The word “right now” conveys present occurrences.

Functions of Deixis

The function of the deixis is pointing. This pointing is to identify the person here, which is designated as person deixis spatial deixis, and temporal deixis.

1. Personal Deixis

The function of personal deixis (who) is to point out the things or speakers.

1. Sadie: “I was not being weird”

The word “I” has a function to point out the speaker, namely Sadie.

2. Sadie: “I feel so out of place, **you**’re the only one that makes people comfortable”

The word “you” has a function to point out the listener, namely Dylan.

3. Dylan: “These are my friends and **they** are super nice to you, too”

The word “they” has a function to point out the object, namely Dylan’s friends.

2. Spatial Deixis

The function of spatial deixis (where) is to point out the location or location of the object or person speaking.

1. Dylan: “These are people I haven’t seen in like ten years and you just sit **there** the entire time”

The word “there” has a function to point out the location. The word “there” refers to the distal form.

2. Sadie: “You dropped my hand! What am I supposed to do with **that**?”

The word “that” has a function to point out the location. The word “that” refers to the proximal form.

3. Temporal Deixis

The function of temporal deixis (where) is to point out the time of the thing or person speaking.

1. Dylan: “These are people I haven’t seen like ten years and you just sit there the **entire time**”

The word “entire time” conveys past occurrences.

2. Dylan: "You're making it about you're, you're acting self... I'm saying you're acting selfish, absolutely. **Right now** that's exactly what's happening."

The term "right" has a function to point out the time. The word "right now" conveys present occurrences.

Conclusion

As a result, the researcher gathers the data and concludes to the conclusion that the *All Too Well* movie script contains deixis of three different types, each serving different functions. As a result of the data, the researcher concludes two. First, there are 102 data found, the first it personal deixis, namely: I (28), me (9), my (3), we (1), you (29), your (3), it (5), these (3), that (6), they (3), and them (1). The second is spatial deixis: these (1), and that (1). The temporal deixis, namely: entire time (1), entire night (2), ten years (1), night (1), now (2), and right now (1). Second, for readers, this research hopefully can be used as a reference to support relevant studies done by the other researchers and this research could be used as a tool for the readers to improve English reading skills. With reading this research, readers also could advance their deictic expression knowledge, and vocabulary English skill.
